Nutrient Analysis

Nutrient Analysis, delivered through the Cargill® Nutrition Cloud, allows you to use one central cloud platform to manage your ingredient and finished goods samples in an easy-to-use system. Understand the nutrient composition of ingredients with accuracy and confidence for more predictable animal performance.

Key Advantages

Quality control and regulatory compliance

- Get recommendations for when to test ingredients, so you only test when necessary.
- Capture, store, and manage lab data in one place, and streamline the sample submission process.
- Verify that finished feeds meet label claim objectives.

Precise formulations

- Easily update your nutrient values with current data to precisely formulate and eliminate safety margins while improving feed consistency.
- Add predictive nutrient analytics to save your business up to \$1.50 (USD) per ton.

Supplier evaluation at your fingertips

- Easily analyze ingredient quality and consistency data by farm, supplier, and location to make smarter purchasing decisions based on the nutrients each ingredient provides.
- Confirm whether ingredient shipments meet agreed-upon quality specifications and identify opportunities to make supplier claims.

With Nutrient Analysis You Can...

- Reduce over-formulation to save on feed cost and eliminate waste.
- Reduce under-formulation to meet label claims and achieve more consistent, predictable feed and animal performance.
- More effectively use your lab data and access a shared database of more than 3 million samples from Cargill ingredient loads and participating customers - giving you the most powerful insights in the industry.
