

Supercharge Flock Performance

Nutrient absorption plays a critical role in poultry performance and profitability. To boost results and equip flocks to reach their genetic potential, producers need to supercharge digestion and nutrient utilization.

Reliable, Measurable Performance Across Poultry Species

The scientifically advanced formula delivers consistent results in feed conversion, body weight gain, and livability, helping broiler, layer, and turkey producers achieve dependable performance.

This technology:

- Helps birds break down feed more effectively resulting in more efficient nutrient absorption and utilization
- Supports stronger gut function and more consistent performance
- Improves feed palatability to support better feed intake

Biostrong™ Boost Max provides confidence that performance benefits are reliable, and repeatable in real-world production environments. In research and field trials, Biostrong™ Boost Max has consistently demonstrated improvements in feed efficiency and flock performance.

Biostrong™ Boost Max

The powerful, multi-action phytogetic compounds in Biostrong™ Boost Max include essential oils, saponins, spices, and bitter substances, that actively optimize gut function and nutrient absorption. The proprietary blend of functional ingredients in Biostrong™ Boost Max is shown to:

- Increase protein breakdown and nutrient absorption to elevate performance
- Support lay persistency, optimize breast meat yield and quality, and boost overall flock performance
- Enhance feed conversion, body weight gain and flock livability
- Amplify the value of feed programs, maximizing producer's feed investment

Boost Nutrient Absorption. Elevate Performance.

By supporting improved nutrient digestibility and utilization, Biostrong™ Boost Max helps producers:

- Optimize nutrient utilization to maximize their flocks' genetic potential
- Improve feed efficiency to help reduce cost per bird
- Maximize return on feed investment

Its proven mode of action fits seamlessly into multiple production phases, helping deliver achievable, consistent results.

Trust The Numbers

Birds fed Biostrong™ Boost Max have consistently shown increases in overall performance factors, including body weight gain, feed intake, and feed conversion ratio. Biostrong™ Boost Max integrates into existing feed programs to amplify its value and provide return on investment.

Effect on performance – Cobb 500 at 42 days of age

Expertise That Pushes Innovation

Biostrong™ Boost Max is powered by the global science network at Cargill Animal Nutrition and Health and is supported by dedicated research and technical teams focused on producer success.

Cargill combines proven science, nutrition expertise, and extensive R&D to provide solutions that support efficient poultry production and bring a true, lasting partnership to producers.
